GitHub: github.com/Aadityya07 | **Portfolio:** <https://aditya-yadav2004.vercel.app/> | Nashik, India

Summary

Full-Stack Developer focused on building scalable AI-powered applications using Python and modern web technologies. Experienced in integrating Machine Learning models, RAG pipelines, and Large Language Models (Mistral, LLaVA) into scalable systems. Strong interest in Artificial Intelligence, with hands-on experience in developing intelligent pipelines combining data processing, deep learning, and backend engineering.

Experience

- Full Stack Developer Intern** **Jan 2026 – Feb 2026**
Nexonica Systems Pvt. Ltd. *Nashik, India*
 - Designed and optimized backend systems and REST APIs using Flask, improving database efficiency and reducing system latency.
 - Built and deployed production-ready applications integrating AI-driven text processing pipelines with PostgreSQL databases.

Skills

Programming: Python, C++, SQL, HTML, CSS, JavaScript

Frameworks: Flask, React.js, REST APIs, API Development

AI & ML: Machine Learning, Deep Learning, RAG, LLMs (Mistral, LLaVA), TensorFlow

Databases: PostgreSQL, Firebase

Tools: Git, GitHub, Postman, VS Code, Jupyter Notebook, Google Colab

Projects

- DiagnoAI** | [GitHub](#) | *Python, React, Flask, LLaVA, Mistral, TensorFlow*
 - Built an AI-powered diagnostic assistant combining deep learning-based medical image analysis with LLM-driven clinical insights for multimodal decision support.
 - Implemented a two-phase deterministic triage system and dual-pipeline OCR (EasyOCR) to validate medical inputs and filter irrelevant/non-medical data before LLM processing.
- RIFT Forensics Engine** | [GitHub](#) | *React, Flask, NetworkX, Cytoscape.js*
 - Developed a full-stack Anti-Money Laundering platform to detect complex 3–5 hop circular money muling networks in large-scale transaction graphs.
 - Designed DFS algorithms and variance-based filtering heuristics with Benford's Law anomaly detection for dynamically rendering 10,000+ nodes.
- Insight PDF (RAG-Based AI Summarizer)** | [GitHub](#) | *Python, Flask, FAISS*
 - Constructed a Retrieval-Augmented Generation (RAG) system utilizing FAISS for robust vector similarity search and contextual document summarization.
 - Engineered a Flask backend to rapidly chunk, clean, vectorize, and index large PDF datasets to serve scalable, AI-driven text insights.
- Culling Games** | [GitHub](#) | *Flask, PostgreSQL, React, REST APIs*
 - Built a full-stack multi-role competitive platform featuring dynamic game state management, strategic power systems, and JWT authentication used by 200+ users.
 - Engineered a manual trigger progression mechanism strictly managed by master users, ensuring fair gameplay via concurrency-safe backend design.

Education

Degree / Certificate	Institution	Duration	Score
B.E. Artificial Intelligence & Data Science	Pune Vidhyarthi Griha's College of Eng.	Aug 2023 – Jun 2027	CGPA: 8.5
Higher Secondary Certificate (HSC)	G.D. Sawant Arts, Commerce & Science	Nov 2020 – Mar 2022	65.00%
Secondary School Certificate (SSC)	K.K. Wagh English School	Jun 2010 – Mar 2020	80.40%

Achievements & Leadership

- Secretary at SAIGE:** Spearheaded technical initiatives and organized AI-focused learning programs, guiding peers in Machine Learning and Generative AI.
- Hackathon Competitor & Technical Lead:** Led Team NeuroVanta as primary Technical Lead in 6+ hackathons, securing 2+ overall victories including the internal Smart India Hackathon.
- National Finalist:** Reached the finals of the highly competitive Rift'26 Hackathon organized by Physics Wallah (PW) Institute of Innovation.
